

Bilal Ahmad

SOFTWARE ENGINEER

+92 303 7377597 bilal072ahmad@gmail.com Sahiwal, Pakistan (Open to Relocation) linkedin.com/in/bilalahmad072
github.com/Profysr

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 3+ years of experience building production web applications, automation systems, and scalable backend services (React, Django, Node.js, Docker). Proven track record leading development teams and delivering multi-tenant SaaS platforms. Immediately available and open to relocation to Saudi Arabia and the wider GCC region.

TECHNICAL EXPERTISE

Languages & Backend: Python, JavaScript (ES6+), Django, Django REST Framework, Node.js, Express

Frontend & DBs: React, PostgreSQL, MongoDB, WebSockets, Redis, HTML5/CSS3

Automation & Scripting: n8n, Power Automate, PowerShell, Celery, RabbitMQ

DevOps & Tools: Docker, Git, REST APIs, System One, EMIS, Docman

PROFESSIONAL EXPERIENCE

Software Development Lead | KYNOBY Manchester, UK (Remote) | Mar 2025 – Jul 2026

- Joined as an RPA Engineer building automation pipelines for clinical systems (System One, EMIS, Docman) to streamline medical letter processing and repeat prescriptions.
- Promoted to Team Lead, taking responsibility for leading the engineering team, managing sprint planning, and driving architecture upgrades across core products.
- Integrated multi-prompt LLM features and AI capabilities directly into production tool.

Full Stack Developer | VEC London, UK (Remote) | Aug 2023 – Nov 2024

- Joined as a Web Development Intern and earned a promotion to Full-Stack Developer after 3 months.
- Engineered scalable full-stack web applications using React and Django while implementing automated backend workflows via n8n.

KEY PROJECTS

JCN — Multi-Tenant Workspace & Team Management Platform [GitHub Repository ↗](#)

Stack: React · Django REST Framework · PostgreSQL · Celery · WebSockets · Redis · RabbitMQ

- Architected an open-source SaaS application combining team management, organizational structures, and automated HR tools.
- Engineered real-time Kanban boards and sprint updates using WebSocket protocols, supported by asynchronous background tasks with Celery and Redis.

Log Viewer — Reusable Processing Log UI

Stack: React · REST API

- Built a plug-and-play frontend for backend processing logs, with search, expand, and export to Markdown/PDF.
- Designed for 3-step integration: mount the route, connect 3 REST endpoints, supply filter config.

Query Profiling & Sandbox Testing Tool

Stack: Django · Django REST Framework · PostgreSQL · sqlglot · model_bakery

- Developed a developer tool auto-discovering DRF endpoints, generating schema-aware mock data, and executing isolated sandbox transactions.
- Implemented AST-based SQL query fingerprinting to automatically detect N+1 query performance bottlenecks and recommend ORM fixes.

XFM — Config-Driven Rules & Data Transformation Engine

- Built a no-code rules engine and admin UI that defines medical requirements into JSON Configuration to reduce load over the Power Automate.
- Designed a stateful memory layer retaining context across sequential transformation runs for long-running workflows.

EDUCATION

BS in Software Engineering | COMSATS University Islamabad Jan 2021 – Jan 2025

- Graduated with a 3.5 GPA (87%); awarded Admission Merit Topper Scholarship and Prime Minister Laptop Award.
- Led the end-to-end development of an Advisory Management System from conceptual design to deployment.
